How to draw a snowflake

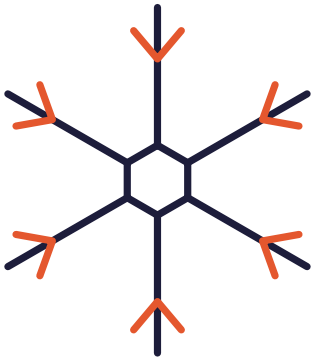

1 Draw six lines going out from the middle, like spokes on a wheel. Leave a little gap in the centre.

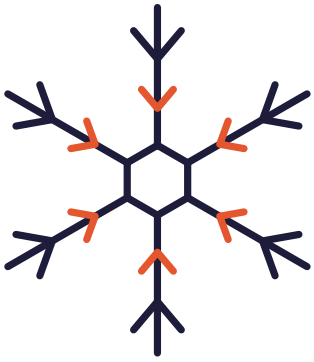

2 Draw a small hexagon in the middle that joins all six lines.

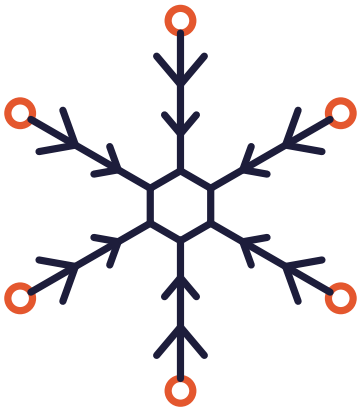

3 Near the end of each line, draw a V that opens outwards, like two little branches.

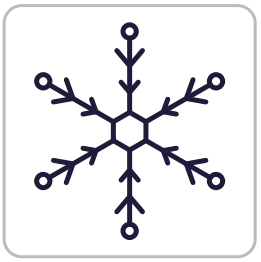

4 Draw a smaller V on each line, closer to the middle.

5 Finish each line with a small circle at the tip.

Now draw your own snowflake
