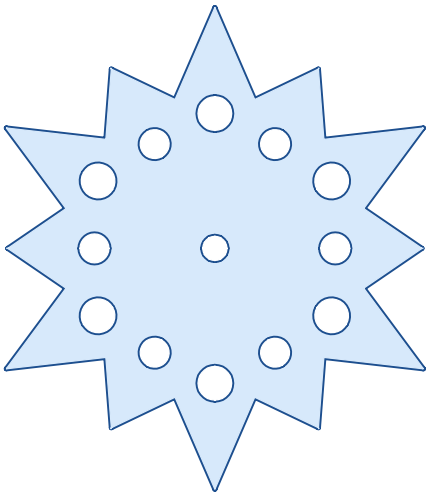
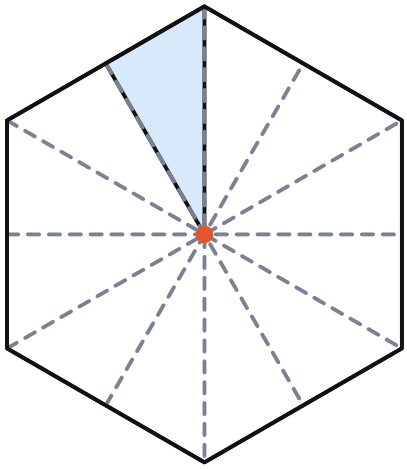
Twelve-Point Star Paper Snowflake

How to fold and cut a six-point snowflake - easy

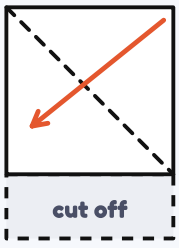


Your snowflake when it is opened



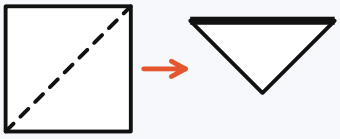
The folds make 12 equal slices. The shaded one is your template. Every cut goes through all 12.

1



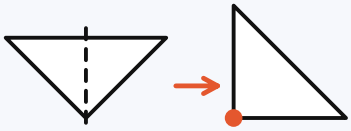
Make a square: fold the top corner down to the side, then cut off the strip below.

2



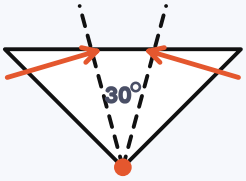
Fold the square in half, corner to corner, to make a triangle.

3



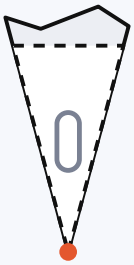
Fold it in half again. The corner where the folds meet is the centre point.

4



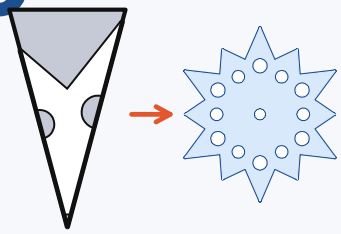
Fold it in thirds from the centre point: one side to the front, one to the back.

5



Line up the template's point with the centre point and clip it on.

6



Cut away the grey parts through every layer, then unfold gently.

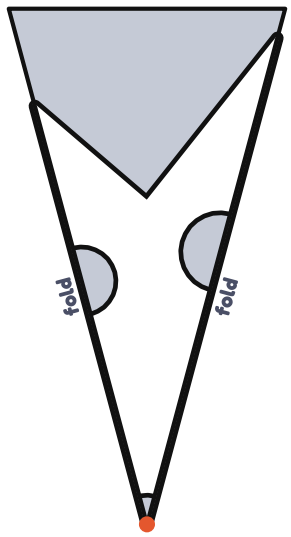
Twelve-Point Star Snowflake: Cutting Template

Cut away the grey parts. Keep the white parts.

cut away keep

1. **Cut out the template you need along its outer line.**
2. **Fold your square as shown on page 1. Lay the template on top with its red dot on the centre point and both sides along the folds. Hold it with a paper clip.**
3. **Cut through the template and all the paper layers along the dark lines. Cut the shapes on a fold as half shapes, starting from the fold.**
4. **Unfold slowly and press it flat under a book.**

For a 15 cm or 6 in origami square: 7 cm on A4, 2.6 in on Letter



For a 21 cm or 8.5 in square: 10 cm long on A4, 3.8 in on Letter
